740 Willowbrook Road, Boulder, Colorado 80302

Boulder (Boulder County) is located at one mile above sea level, about thirty-five miles northwest of Denver. It is located on flat prairie, but only a few hundred yards west of our house, the foothills of the Rocky Mountains rise sharply upward, and the high mountains of the Continental Divide are about thirty miles to the west. It has a population of about 50,000. Located in it are the University of Colorado and several research laboratories, including part of the National Bureau of Standards, where I am employed as a physicist. The excellent scenery and climate compensate for the fact that it is a much more difficult DX from here than from the East Coast, where we lived previously.

My family consists of my wife Dorothy, son Jerry (born 1951), and daughter Debbie (born 1954). Among our other interests is stamp collecting, and I am glad to swap stamps. I was first licensed as W3AWH in Trenton, New Jersey, in 1930. For fifteen years I was licensed as W2AWH in Riverdale, New York City. In 1961 we moved to Boulder. I operate all bands from 1.8 Mc to 144 Mc, CW, AM, and SSB, and nearly all of my equipment is home built. I am particularly anxious to work stations in the 18 countries which I have visited. Many thanks to W2OBX for designing this type of QSL.
